

Ingredient Name	INGREDIENT RATING	Green House Emissions	Water	Land Use	Eutrophication Emissions
		<small>Greenhouse gas emissions are measured in kilograms of carbon dioxide equivalents (kgCO<sub>2</sub>e) per 1000 kilocalories. This means non-CO<sub>2</sub> greenhouse gases are included and weighted by their relative warming impact.</small>	<small>Freshwater withdrawals are measured in liters per kilogram of food product</small>	<small>Land use is measured in meters squared (m<sup>2</sup>) per kilogram of a given food product</small>	<small>Eutrophying emissions represent runoff of excess nutrients into the surrounding environment and waterways, which affect and pollute ecosystems. They are measured in grams of phosphate equivalents (PE) per kilogram.</small>
